GUARANTY

We use every precaution to have all our stock true to label and name, but should any not prove to be so, we will replace it without charge or refund the purchase price, but all orders are accepted by us upon the mutual agreement between purchaser and ourselves, that we shall not be responsible for other damages, either expressed or implied.

Why You Should Plant Our Trees

Because they are home grown.

Because they are well grown and clean.

Because they are well rooted and stocky.

Because they are grafts, and buds are from bearing trees.

Because we are right at your door and you can find us to make everything right and

Because it is good common sense.

TO GET THE CREAM, SEND IN YOUR ORDER NOW

PRICES ARE RIGHT

The Everblooming Butterfly Bush

(*Buddleya Variabilis Magnifica*)

APR 29 1916

It was a matter of some thought before this highly desirable plant was finally christened with the common English name by which it goes. Several years ago there were imported from Europe, some plant novelties and this one was among them. We observed it carefully for a season and were charmed with its beauty, ease of culture and free flowering habit. The name BUTTERFLY BUSH was applied to it because it seems to attract butterflies in large numbers. Particularly we notice that it is not alone the common little yellow species of butterfly, but also the large and gorgeously colored butterflies that swarm about it as though vieing with it in brilliancy of color. This shrub from a young plant set out either in the Spring or Fall, will mature to full size the first Summer, producing a handsome bush, which the first year often attains a height of four feet. It produces long, graceful stems, which terminate in tapering panicles of beautiful lilac-colored flowers that are of miniature size and borne by the hundreds on a flower head which is frequently 10 inches long. A single plant the first season will throw out as many as 50 flower spikes, which increase greatly in number during succeeding years. The year after planting, it generally commences to flower in June and continuing each season until severe frosts nip it. The foliage and blooms are exceedingly fine. The shrub is rather semi-herbaceous, by which we mean in some latitudes it will die down to the ground and while perfectly hardy, we recommend covering the roots with manure, leaves or other suitable material as winter approaches, as this will produce a heavy growth the following season. This shrub is very desirable as an individual specimen in the lawn and garden, or placed promiscuously in the shrubbery border.

SPECIAL MERITS

1. Very hardy.
2. Blooms the first season.
3. Flowers from early summer till frost.
4. Rich, striking color.
5. Splendid for cutting. Very free flowering.
6. Will thrive anywhere.

One delighted admirer in commenting on the BUTTERFLY BUSH, wrote:

"The Butterfly Bushes are wonders. I wish you could see them. Five feet high, and full of handsome flowers. All who see them praise their beauty and free flowering qualities, and I would suggest that the following slogan be applied to it:

Just let its odor once delight your nose
And you will say, "A rival of the rose."

We make the following very special prices for strong, young plants, with good roots that will take hold quickly, grow fast and bloom the first season:

\$4.50 per Doz., 3 for \$1.25, 50c. Each
